

Asset Nakupov

Middle Full-Stack Engineer · TypeScript / Go / Node.js / .NET · Production Systems · 📍 Tbilisi, Georgia · Open to relocation · IELTS 8.5

Profile

Full-stack engineer with production experience across multi-service architectures spanning TypeScript, .NET, Go, Kafka, and SOAP/GDS integrations. At Yolwise, restored ~85% of suppressed flight inventory across 10+ major carriers and refactored an async Kafka-driven booking pipeline to eliminate silent payment failures — debugging root causes across three codebases simultaneously. Previously shipped 7+ production full-stack applications with 1,000s of messages end-to-end under assetn.dev. Seven years in BigLaw at Morgan Lewis (\$100M+ M&A) proves architectural, business and structured thinking, root-cause analysis.

Core Technical Stack

Languages & Runtime: [TypeScript](#), [JavaScript](#), [Node.js](#), [C#](#), [.NET](#), [ASP.NET](#)

Frontend: [React](#), [Tailwind CSS](#), [shadcn/ui](#), [Vite](#)

Backend & Security: [Express](#), [REST APIs](#), [Auth](#)

Data & Persistence: [SQL](#), [PostgreSQL](#), [Prisma ORM](#)

Testing & Quality: [Vitest](#), [TDD](#)

Integrations & Messaging: [Kafka](#), [SOAP](#), [REST](#), [GDS APIs](#)

DevOps: [Git](#), [CI/CD](#), [Docker](#)

Bonus: [Python](#), [pandas](#), [XGBoost](#) · [Telegram Bots](#) · [Game Dev \(Unity, Godot\)](#)

Professional Experience

Middle Full Stack Engineer @ Yolwise

Oct 2025 – Present · Tbilisi, Georgia · Remote

- Restored ~85% of suppressed flight inventory across 10+ global carriers (Emirates, Lufthansa, BA, KLM et al.) by diagnosing a misread GDS availability flag in a Go/SOAP microservice, then rearchitecting the async Kafka-driven booking pipeline to execute session-scoped payments synchronously inline — eliminating a failure class where customer balances were debited with no ticket issued and no error returned to the UI.
- Resolved a production cascade of Allocate failures, branded-fare mismatches, and price inconsistencies across a Go/TypeScript/.NET/SOAP stack by isolating the root cause to a single data pipeline corruption — airport codes silently overwriting city-code fields — that disabled provider selection and broke GDS inventory matching across multiple routes simultaneously.
- Traced a null crash in a multi-step SOAP booking pipeline — surfacing three stages after the actual fault — to a travel document type mismatch injected silently upstream; extended the service with a dynamic provider blacklist enabling real-time isolation of faulty GDS airline integrations while third-party resolution was pending.

Founder & Full-Stack Developer @ assetn.dev

May 2023 – October 2025

Designed and developed 7+ full-stack web applications and internal tools with 1,000s of user messages under the assetn.dev brand. Led all aspects of development. Delivered production-grade solutions using TypeScript, React, Node.js, Prisma, and PostgreSQL.

Previous Career

Senior Associate @ Morgan Lewis & Bockius LLP

Jun 2016 – May 2023

Led \$100M+ M&A and dispute-resolution cases across energy and finance sectors. "Asset provided us with excellent product and legal service and practical advice; his vast knowledge of current legislation and considerable experience deserve special mention." — The Legal 500 Europe, Middle East and Asia

Education

KIMEP University — Bachelor of Laws (BLLB)

2012 – 2016 · Cum Laude · 100% Scholarship Intellectual Olympiad Winner · President's List · Dean's List

Accomplishments

- Graduate of The Odin Project Full-Stack JavaScript Path
- IELTS 8.5 (2025)
- Former Top 5 BigLaw Associate (7 years of experience)
- KIMEP University Intellectual Olympiad Winner (1st place)
- Top University Graduate — GPA 4.11/4.33, Dean's List, President's List

Selected Personal Projects

Soleira Lounge — Full-Stack Social Platform

React · Node.js · Express · PostgreSQL · Prisma · JWT
Full production social platform with user auth, real-time messaging (1000s of messages), notifications, and content management. Demonstrates database architecture, security, and scalable API design.

Viva Verso — Blog / Newsletter CMS

React · Node.js · Express · PostgreSQL · Prisma
Dual-frontend system (public + admin) featuring authentication, CRUD operations, and dynamic content workflows. Emphasizes maintainability and modular patterns.

What Makes Lands Happy — Data Visualization + Analytics

React + TypeScript · Tailwind CSS · Vite · Python · pandas · seaborn
Integrates 18 global datasets through a Python data pipeline, exporting cleaned JSON to a TypeScript visualization app. Bridges frontend data viz with backend analytics.
